

TOOLS

For Future Versions:

We have put this up in case we want to extend this app and make it for all the courses that are floated in our institution or say in all the universities. This will be an official app to register in teams.

Time Constraint and Thinking Ahead

We were trying to incorporate following modifications in our app but we could not because of the time constraint and lag of resources. You can expect the following features in Version 22.1. If you are interested you can give it a read why we couldn't apply the following in this version.

-> GOOGLE API

We tried to include the open source project available from Google on translation of voice to text. By this, user would just have to speak up his/her name and entry number and registration will be done. But there were two factors which stopped us, first being the less knowledge of Google about various names across the country. It simply can't recognise the voice for a lot of names which would create problems. And second being, for some reason, when we tried to include the source file, our app was getting crashed. A little more research is required and this can be resolved hopefully.

-> DATABASE

We thought of giving user an option to select the department and then, available members for his team. But we were not available with any database of all students registered with COP290 to accomplish that. This feature would have given choice to user about his/her team mates. This is little more into the privacy like department of any other course member which was another factor which stopped us.

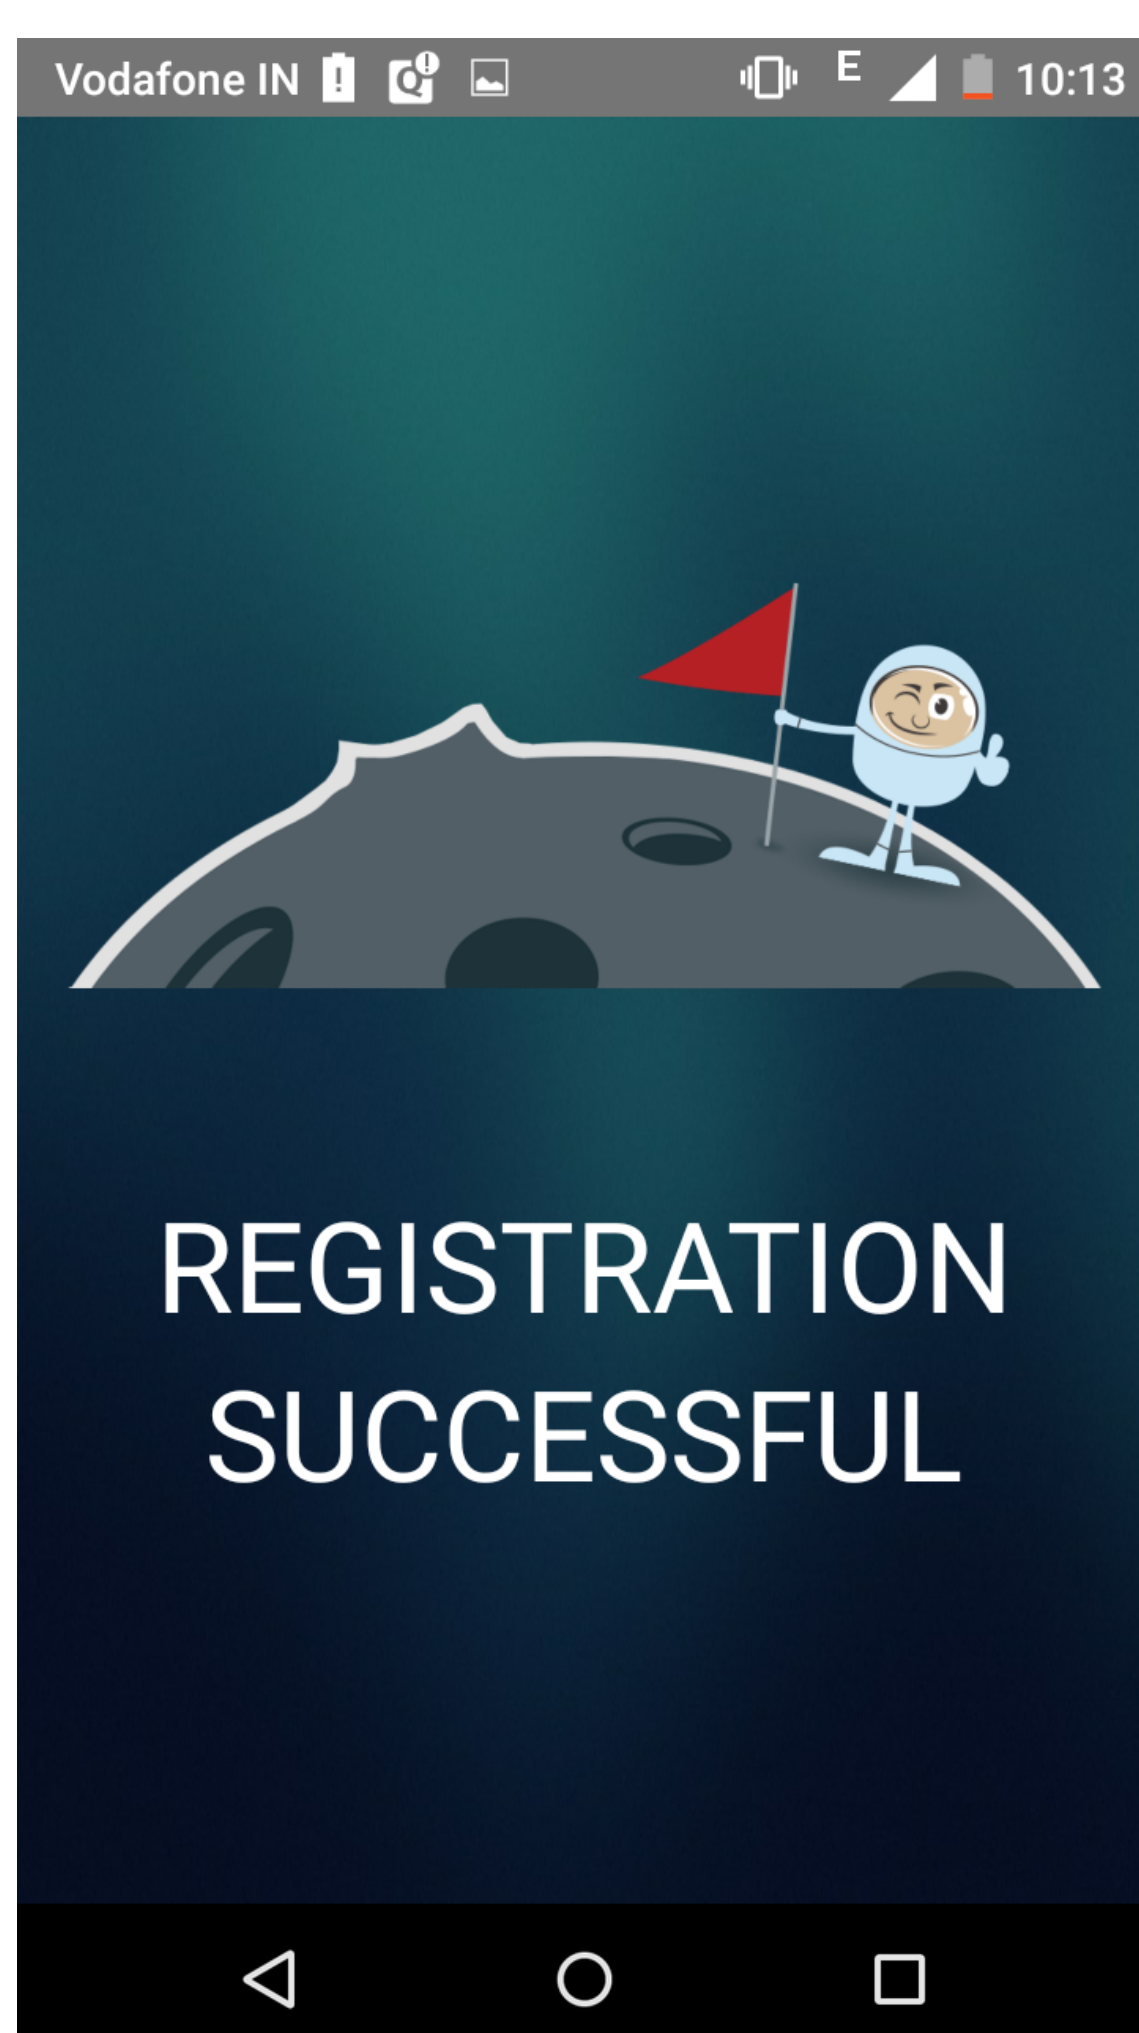

-> Networking

We would like to make this feature available in next feature which is asking the course coordinator's permission and registration of team for the courses through out the campus. This can further be extended to other universities. We just need to do a little more research on networking to accomplish that.

CREDENTIALS

SUCCESS

Finally:

Final Screen if server accepts the request and your team registers successfully for the respective course.

ABOUT APP

Purpose of the app and details for that information.
